

BRAZIL - THE SOUTHEAST ATLANTIC RAINFOREST

To the average traveler, the words "Southeast Brazil" and "Rio" conjure up images of Copacabana, carnival and salsa. However, to birders who have spent 10 days exploring the forested side of the region, "Rio" brings images of arrival and a quick departure to areas more engrossing than the picturesque beaches of the country. And, mention of "Southeast Brazil" evokes memories of endemic cotingas, including Hooded Berryeater and Black-and-Gold Cotinga, broadcasting their presence before being seen; of a day in drier, more open habitat that produced more than 90 bird species including Red-legged Seriema and Three-toed Jacamar; of hours spent searching out skulkers in dimly-lit forest, with the Slaty Bristlefront's auditory and visual performance perhaps walking away with the Best-Of-Tour prize, and a successful owl prowl that provided one of the best views ever of Tawny-browed Owl. Each day and each site provided new species while offering overlap with the previous day's sightings. This provided opportunities to not only see lots of birds in a short time but also to learn about many of them, and by the end of the trip there was a familiarity with the avifauna of Southeast Brazil.

Serra dos Tucanos was a new site on our Southeast itinerary, and this increasingly popular birders' lodge did not disappoint. The feeders in the garden were active with multicolored tanagers, an appearance by a Blond-crested Woodpecker and wonderful hummingbirds that included the appropriately named Brazilian Ruby, which stopped conversation mid-sentence when the sun caught the throat of the male. The hospitality of our hosts, Andy and Cristina, enticed us away from the feeders to enjoy the first of several delicious buffets to be served during our stay. Our first afternoon walk on a narrow forest trail demonstrated that not all birding experiences in the Atlantic rainforest are as easy as the feeders. But we also discovered that no matter the setting, the birding is extraordinary in this area of the country, especially after we sighted our target, Hooded Berryeater,

The next two days were spent exploring higher altitudes and more open habitats further away from the lodge. Flocks of Brassy-breasted Tanagers, an obliging Serra do Mar Tyrannulet and a low-flying Black Hawk-Eagle were all sighted on an unusually clear day that also afforded views of the surrounding mountain peaks. Our day spent birding remnant forest patches and grassland areas was one of the most bird-filled days of the trip, with the group enjoying a confiding Blackish Rail, scope views of Red-legged Seriemas and Streamer-tailed Tyrants, and superb sightings of our primary target of the day, Three-toed Jacamar.

Itatiaia National Park provided us with a new set of bird species, as well as some familiar birds. Our birding experiences here were rivaled by gastronomic indulgences of trout mousse and araucaria pine nuts. Later, an effortless owl prowl featured a Tawny-browed Owl peering at us intently from an open branch, and an eleventh-hour sighting of Araucaria Tit-Spintail was followed by a soup-and-quiche evening that warmed us following our day at the higher elevations. Two days in Brazil's oldest national park provided only a sampling of Itatiaia's rich bird life with a Black Jacobin and other hummingbirds topping the list, as well as many species of antbirds, furnariids including Itatiaia Spintail, Black-capped Piprites, Black-and-Gold Cotinga and, of course, a kaleidoscope of tanagers whose colors were difficult to sort.

Our time along the coast provided yet a new subset of the birds of the Atlantic forest. Buff-throated Purplethroat, Sharpbill and Bare-throated Bellbirds fed our cotinga appetites while Red-necked and Brazilian Tanagers provided us with bright colors against the verdant forest. Those who have an affinity for antbirds regaled in sightings of Black-hooded Antwrens, Scaled Antbirds and a Spot-backed Antshrike among others. Having given up hope, a Buff-bellied Puffbird was finally sighted one afternoon as we walked back to the bus. And, perseverance and cooperation finally produced for the group the ultimate of skulkers, a Slaty Bristlefront, which also provided us the opportunity to hear the charismatic liquid song of this species. The

spectacle of Festive Coquettes, Saw-billed Hermits and other species at Jonas' feeders provided an excellent final afternoon to an incredible trip to southeastern Brazil.

The few species that that eluded us on this trip will hopefully give all of us a reason to return to Brazil for another opportunity to enjoy repeat encounters of favorites, to become further enamored with Brazilian hospitality, and to explore more of this bird-rich and diverse country. Thanks to all of you who made this year's tour a most pleasurable birding experience.

BIRD LIST:

Column A = Number of tours on which this species has been recorded.

Column B = Number of days this species was seen on the last tour.

Column C = Maximum daily count for this species on the last tour.

H = Heard only, (H) = Mostly heard but some seen, N = Nest.
